## **Environmental Exposures and Women's Reproductive Health: Emerging Concerns**

**Shweta Sharma\***

### **Abstract**

Environmental exposures have increasingly emerged as significant contributors to women's reproductive health issues. Various pollutants, ranging from industrial chemicals to air and water contaminants, have raised concerns due to their potential adverse impacts on female reproductive systems. In this research paper the intricate relationship between environmental exposures and women's reproductive health, has aimed to understand the emerging concerns. This paper explores the diverse array of pollutants and their potential effects on the reproductive health of women.

**Keywords:** Environmental Chemicals, Women, Reproductive Health, Fertility.
